VPN ERRORS

1. **Server full**

Touch again on start, keep touching there until it connects, when it finally connects, swipe right and click on update servers. Updating servers reduces the that error.

1. **Engine does not respond**

Wait for some two minutes and again connect or start. if it persists close vpn and start it again.

3. **Upload limit reached or Download limit reached.**

This means that you have used more than 200 Mbs in less than 24 hrs, It can be removed by paying for premium or by creating multiple accounts so that when this reaches limit, you login to another one. or by watching adds before you get disconnected (swipe right, click on rewards

or by watching adds before you get disconnected (swipe right, click on rewards and watch a short videos for 10mbs each,)

This server is for premium users

That means you accidentally selected a server that is not written there free, yet you have not paid for the account. on home screen select one of servers written there free.

Tcp connection failed or icmp you need root

That simply means that on home screen UDP is not selected, touch on word UDP and the connect again

Downstream inactivity detected.

This error is caused by network jumping ofc the phone, switch off on and off or toggle the network back to on, it will connect again

User already online

Wait for two minutes and connect again, if persists, it means there another device using your account or someone got your password and username and he/she is
